

A natural forest being changed to a cultivated forest of Oak and Beech in Spessart, Rotenbuch

A cloaked German forester stands amid a forest in transition. This forest of Oak and Beech trees is natural, but now it is becoming a managed forest. Representatives from the department of conservation toured this forest in Spessart, Germany, in order to study forest management methods. This image was created to record the agricultural and forestry studies performed by the New York State Conservation Department.
