

Sparse pine growth on sandy soil, Keeseville, Clinton County

View of diseased pines in sandy soil. In the foreground is a large patch of what almost looks like snow (but is actually sand); human footprints can clearly be seen. Bushes and stunted pines dot the middle ground. Clusters of tall conifers flourish in the background. This image was created to record forestry and parks activities of the New York State Forest, Fish and Game Commission, Conservation Commission, or Conservation Department.
